MSDS tabs contain essentially the same information as the SDS³ but the language and organization³ may be different. Both the MSDS and the SDS are fact sheets describing the properties and dangers of a product that is unique. MSDS stands for Material Safety Data Sheet. When purchasing a dangerous product, the supplier must send information³ the SDS. The University of California hosts the search for SDS on Google. It is a 16-section format, written in English, containing the following data in the order indicated: SECTION N 1: Identification³ the substance/mixture and the company/company 1.1. Product identifier 1.2. Identified relevant uses of the substance or mixture and recommended uses in point 1.3. Supplier data from the safety data sheet 1.4. For this reason³ n, the datasheet may not be useful for a secular person. MSDS is an older format that must be replaced by SDS, which is an internationally standardized security datasheet. The document can also be called a safety data sheet (SDS) or product safety data sheet (PSD). While this can be printed, it is often available online. The MSDS format is considered to be an older datasheet style. The MSDS or SDS for a chemical, compound or mixture is aimed at workers who treat a substance in a work environment or those who need to transport / store a chemical or deal with accidents, accidents.
